HR Automation – End-to-End Test Report

5 Nov 2026 · @Sundaramoorthy Santhanam

Summary

The core hiring flow works from posting a job to approving salary, but testing found 39 issues: 5 High, 15 Medium and 19 Low. The flow could not be tested past Background checks, because the documents step needs email and no mailbox is connected. Offer, Onboarding and Joined are therefore untested.

The five High issues to fix first:

1. **Home page request loop.** Home calls `GET /api/v1/me/home` about 12 times a second for as long as it is open (199 calls in 16 s).
2. **Wrong salary status.** A candidate whose expected pay is inside the band is marked "Salary Above Band".
3. **Interviews in the past.** An interview can be booked for a date that has already passed.
4. **False "link sent" message.** Background checks says "The upload link was sent." when no mailbox exists to send it.
5. **Wrong "last step" message.** After salary approval, the candidate page says the application "has reached its last step" while Checks, Offer and Joined are still ahead.

These all worked: sign-in and sign-out protection, account lockout, the 8-step job wizard and its checks, publishing to the careers page, applying, AI resume reading and scoring, shortlisting and the salary drawer. Pages also fit a 390 px phone screen without sideways scrolling.

Account note: the lockout test locked ys@ctdtechs.com for 15 minutes at about 18:25 on 5 Nov; it clears by itself. **Test data created:** 5 jobs named "E2E Test …" (1 open, 4 drafts) and 2 applications from "E2E Test Candidate" (e2e.candidate@example.com). Delete these before a demo.

Test environment and scope

Item	Value

Frontend	Vite dev server, http://localhost:5173 (branch `hrms-platform`, commit c21fe43)
Backend	FastAPI, http://localhost:8000 (health: ok)
Tenant	CTD Techs (fresh tenant: 0 jobs, 0 candidates, 0 employees, no mailbox, no AI provider)
Test account	ys@ctdtechs.com (HR admin, display name "Sundar")
Browser	Google Chrome (headless) driven by Playwright, 1440x900 desktop and 390x844 mobile

Every route in the frontend router was opened while signed in: 32 sidebar pages, 16 routes that exist in the router but not in the sidebar, and 13 Settings sub-pages, for 61 pages in all. For each page the run recorded failed API calls (HTTP 4xx/5xx), console errors, JavaScript crashes, load time and a full-page screenshot. The core hiring flow was then exercised by creating test records whose names start with "E2E Test".

Issues by page

Pages are in the order a user meets them. Each ID is unique so it can be used as a ticket reference.

Login and sign-up

ID	Severity	Issue	How to reproduce
L1	Medium	There is no "Forgot password" link. The error message tells users to ask their HR admin.	Open /login.
L2	Low	A locked account shows the same "We couldn't sign you in" message as a wrong password. The API returns 423 "temporarily locked", but the user is never told to wait 15 minutes.	Enter a wrong password 5 times, then the right one.

L3	Medium	The public sign-up page ("No account yet? Create one") lets anyone create an account and choose "Your role". Confirm which roles are offered and whether this should be public at all. Not submitted during testing.	Open /register.

Home

ID	Severity	Issue	How to reproduce
H1	High	Home calls `GET /api/v1/me/home` about 12 times a second without stopping (199 calls in 16 s). Cause: in `HomePage.tsx` line 102, `modules` is a new array on every render. That changes the `load` callback (line 120), which re-runs the effect, which sets state, and the loop continues. Fix: wrap `modules` in `useMemo`.	Open / and watch the Network tab.
H2	Low	The "Finish setting up" list shows raw keys as titles: "company", "entities locations", "branding", "mailbox".	Open /.
H3	Medium	Configuration health says "Resumes can't be read by AI yet - connect an AI provider". But AI read and scored the test resume, drafted a job description, and Settings > Integrations > AI says "AI is on".	Compare / with /settings/integrations/ai.
H4	Low	The floating assistant button covers the "Ignore this" button on the third health row.	Open / at 1440 px width.

Jobs and the New job wizard

These checks worked: required title, openings of at least 1, min experience not above max, lowest pay not above highest, at least one skill, required description, and AI drafting.

ID	Severity	Issue	How to reproduce
J1	Medium	Every time the wizard is opened, a draft job is saved, even if the user cancels. "Start fresh" creates another one. Duplicate titles are allowed, and 4 abandoned drafts piled up during testing.	Open New job, type a title, press Cancel, then repeat.
J2	Low	Pay shows as raw numbers ("Pay 800000 – 1500000") in the wizard and the review step, with no ₹ sign or digit grouping. Other pages show "₹14,00,000" or "8 L – 15 L".	Enter a pay range and go to Review & publish.
J3	Low	The "Jobs by Location" card says "No open jobs yet" while the page counts 1 open job.	Publish a job without a location.
J4	Low	KPI cards show "▲ 100% vs last month" when last month was 0. A rise from zero has no percentage.	Create the first job of the month.

Careers site (public)

The listing, job page, apply form, resume upload and thank-you page all worked.

ID	Severity	Issue	How to reproduce
C1	Medium	The same email can apply to the same job twice. It creates a second application, which is only flagged "Possible duplicate".	Submit the apply form twice with the same email.
C2	Low	"privacy policy" in the consent text is not a link.	Open any job's Apply page.
C3	Low	Required-field errors are the browser's own English pop-ups ("Please fill out this field"). The app's language setting does not apply to them.	Press Send application with empty fields.

All candidates

ID	Severity	Issue	How to reproduce
A1	Medium	On the same row, the Match score column says 97% but Remarks says "Match score 96/100".	Second E2E Test Candidate row in /candidates/list.
A2	Medium	Clicking a candidate's name or row does nothing. The only way into a profile is an icon in the Actions column. At 1440 px that column is off-screen and Remarks is cut off.	Open /candidates/list at 1440 px.
A3	Low	On a phone, 12 filter fields fill the first screen before any results appear.	Open /candidates/list at 390 px.

Candidate profile

ID	Severity	Issue	How to reproduce

P1	High	Once salary is approved, the page says "This application has reached its last step. There is nothing more to do here." Checks, Offer and Joined are still ahead.	Approve salary, then open the candidate.
P2	Medium	"Approve/Reject Salary" appears where the next action normally sits, but it is plain text, not a button. The user has to find the Salary page instead.	Mark an interview as Selected, then open the candidate.
P3	Medium	"Interview Feedback: Selected / Rejected" records the result in one click, with no confirmation, scorecard or note. It is offered as soon as the interview is booked.	Book an interview, then click Selected.
P4	Low	The score shows "7.0 years in similar roles", but total experience is 5 years.	Open the test candidate's "Why this score" panel.
P5	Low	Some labels are unclear or inconsistent. A chart legend runs words together ("E2E Test CandidateShortlist threshold"). "We call them … (full name - set the first name)" is hard to follow. Buttons mix Title Case ("Schedule Interview") with the sentence case used elsewhere.	Open any candidate.

Interviews (booking)

ID	Severity	Issue	How to reproduce
I1	High	An interview can be booked in the past. 1 Jan 2025, 10:00 was accepted without warning.	Candidate > Book manually > enter a past date.
I2	Medium	The meeting link field accepts any text. "not a url" was saved and shown to the user.	Same form, type any text as the link.

I3	Low	The confirmation reads "Booked: Jan 1, 10:00 AM with the interviewer". It has no year, and it mentions an interviewer when none was chosen.	Book without picking an interviewer.

Salary

ID	Severity	Issue	How to reproduce
S1	High	Status is "Salary Above Band", and the "Above range" count is 1, for expected pay of ₹14,00,000 in an 8 L – 15 L band. The drawer gives the real reason: "Current salary not known". The score card says "within the band".	Apply with expected pay inside the band and no current pay, then mark the interview Selected.
S2	Medium	After Approve, the drawer shows "Approved" but still reads "Salary Above Band / Needs approval / Approved: —" until it is closed.	Approve in the Salary drawer.
S3	Low	History shows "Salary form emailed" although no mailbox is connected. The approval message says "The amount is reserved in the department budget" although the job has no department and the drawer says "No budget set".	Open the salary drawer.

Background checks

Working as intended: "Approve all and start BGV" stays disabled while required documents are missing.

ID	Severity	Issue	How to reproduce

B1	High	"Resend the upload link" shows "The upload link was sent." with no mailbox connected, so nothing was sent. HR also has no way to copy the link or upload documents for the candidate, so the flow stops here.	Background checks > candidate > Resend the upload link.
B2	Low	The page shows the candidate table and the "Choose a job to start" empty state at the same time. Offers has the same problem.	Open /bgv or /offers without choosing a job.
B3	Low	A button reads "Ask the candidate again for 0 document(s)".	Open the documents drawer before anything is uploaded.

Offers, Onboarding, Employees

Not tested beyond the empty state, because no candidate could get past Background checks (B1). The pages load with no errors.

Reports

ID	Severity	Issue	How to reproduce
R1	Medium	Report builder is in the sidebar, but its API calls (`/api/v1/intelligence/reports` , `/datasets`) return 404. The page shows Excel, CSV, PDF and Save buttons, then "This module isn't enabled … It may have been moved or removed". The "Build your own report" card on /reports does the same.	Open /reports/builder.

My profile and Exits

ID	Severity	Issue	How to reproduce
M1	Low	The admin account is not linked to an employee record, so My profile is empty and Exits cannot be used. Probably a setup issue for this tenant, but nothing tells the admin how to link it.	Open /me.

Settings

ID	Severity	Issue	How to reproduce
ST1	Medium	The Performance and Helpdesk cards stay visible for disabled modules. Their forms (such as "Cycle name *") appear under a "not enabled" banner, and the API returns 404.	Open /settings/performance/cycles.
ST2	Low	10 translation keys are missing (console warnings): `settingsHome.page.company.modules`, 7 `purpose.*` keys on Integrations, and `nav.home` and `nav.recruitment` on Billing.	Open those pages with the console open.
ST3	Low	Approval steps show internal codes: "core_hr.probation_confirmation", "v1", "published".	Open /settings/automation/approvals.

Pages reachable only by URL

ID	Severity	Issue	How to reproduce
X1	Medium	10 routes missing from the sidebar still load, show working buttons ("Raise a ticket", "Add a goal", "Add an asset"), then fail with "This module isn't enabled" or "We couldn't load the directory" after API 404s: /people, /directory, /performance, /performance/team, /helpdesk, /helpdesk/queue, /analytics, /assets, /compensation, /succession. They should redirect or show one clean "module off" page.	Type any of these URLs.
X2	Medium	An unknown URL shows a completely blank page, with no "page not found" message and no menu.	Open /nonexistent-page-xyz.
X3	Low	The platform Super-admin sign-in page is reachable from the company's own address. Confirm this is intended.	Open /superadmin.

Issues across all pages

These patterns show up on many pages, so fixing each once clears several of the issues above.

- **Success shown when no email was sent (B1, S3).** With no mailbox connected, several actions still report that something was sent. Every message that says "sent" should first check that the email was actually delivered or queued.
- **One error message for every failure (R1, X1, ST1).** "It may have been moved or removed. Try going back to the list." appears whether the module is switched off or the API returned 404. Each case needs its own message.
- **Disabled modules still visible (R1, X1, ST1).** Pages, Settings cards and buttons for modules that are switched off still appear and fail only after loading. Hide them in one place, at the route and menu level.
- **Page tour on every first visit.** A dimmed tour opens on the first visit to each page and blocks clicks until it is closed. "Don't show again" applies only to that page and only in that browser (`localStorage` key `hrms.pagetours.seen`), so it comes back on every

new page and every new device. Consider one setting for the whole account, saved on the server.

- **Mixed number and date formats (J2, I3).** Money appears as "800000", "1,400,000", "₹14,00,000" and "8 L". Dates appear as "11/5/2026" and "Jan 1" (no year). Use one formatter for each.
- **Floating assistant button (H4, A3).** It sits over buttons on Home and over the pager and Reset on phone screens.
- **No technical failures elsewhere.** No JavaScript crashes on any of the 61 pages opened. The only API failures were the 404s listed under R1, X1 and ST1, and the 423 lockout. Icon buttons have proper labels for screen readers, for example "Open E2E Test Candidate's profile".

Suggested fix order

1. **Before any demo:** H1 (the request loop loads the server whenever Home is open), S1, P1 and I1. They give wrong information on the main hiring path.
2. **Before connecting a real mailbox:** B1 and S3, so that "sent" messages are true. Also give HR a way to copy the document-upload link, so the flow can continue when email fails.
3. **Then retest the second half of the flow** with a mailbox connected: documents, background checks, offer letter and e-sign, onboarding, and the move to Employees. None of it could be reached in this run.
4. **Product decisions needed:** L1 (password reset), L3 (public sign-up and role choice), C1 (duplicate applications), J1 (auto-saved drafts) and X3 (super-admin URL).
5. **Clean-up:** hide disabled modules in one place (X1, R1, ST1), add a "page not found" screen (X2), then work through the Low items as one polish pass.

- [ ] Delete the E2E test data: 5 "E2E Test …" jobs and 2 "E2E Test Candidate" applications
